

# Lab 2:Agile Backlog Creation & Sprint Simulation in Jira

## Problem Statement

Faculty Research Grant & Publication Tracker

Name:Darisi Anantha Venkata Sreeram

SRN:PES1UG24AM076

Section:B

1)

## Jira Backlog with Prioritized User Stories and Story Point Estimates

2)

## Sprint 1 Execution Board Showing User Story Progress

3)

**Sprint 2 Execution Board with Completed Research Tracking Stories**

4)

Sprint 2 Burndown Showing Story Point Completion

**1. Were the story-point estimates accurate compared to the actual effort?**

The story-point estimates were reasonably accurate for the sprint simulation. The stories were completed within the sprint, and the estimated complexity helped in deciding how much work could be included.

**2. How did backlog prioritization affect sprint planning?**

High-priority stories were selected first for Sprint 1. The remaining stories were taken into Sprint 2 based on their priority and available sprint capacity. This helped organize the work systematically.

**3. Did the sprint work align with the sprint goal?**

Yes. The selected stories were related to the Faculty Research Grant & Publication Tracker system and were completed during the planned sprints. The work progressed from To Do to In Progress and finally Done.

**4. What did the Burndown Chart indicate about progress and capacity?**

The Burndown Chart showed the remaining story points decreasing to zero by the end of the sprint. This indicates that all planned work was completed within the sprint and that the

**team was able to handle the selected workload.**

### **Conclusion:**

**The Jira sprint simulation helped demonstrate backlog prioritization, story-point estimation, sprint planning, task tracking, and progress monitoring using the Burndown Chart.**
